

Our Mission

It is our firm belief that to be the best a firm cannot simply offer IT solutions, we are the best by exceeding our clients expectations. Our expert staff is dedicated to providing unparalleled customer service by understanding our clients current and future needs. It is our mission and goal to provide premier Global IT solutions served with a smile.

Our Company

We are uniquely positioned to providing expert technical solutions. Our greatest strength is our staff. Bay Systems Consulting, Inc. has a team of accessible, qualified consultants who each have ten to fifteen years of experience and are leaders in their field.

We provide personal expertise in systems administration, database administration, network engineering, applications engineering and software engineering for virtually every industry. Bay Systems Consulting, Inc. is uniquely qualified to add 'value' and contribute to our business partners' objective to ensure successful and on-time completion of projects and contracts.

We are the Data Center Experts!

With a breadth of knowledge and first hand experience behind us we provide the best practices in the industry. We begin the high level process with 4 phases:

Requirements Gathering

The key to the success of any design and subsequent implementation is a clear understanding of the customer's needs. It is critical that both present and future needs are identified and that the scope of the project is defined as these factors influence specific equipment, memory, and software requirements.

Design Phase

The Enterprise Storage Network design is the formal process of defining a storage network architecture. The engineered Enterprise Storage Network design is developed by the Solutions Architect who reviews the physical hardware and software to be ordered by the account team and customer and provides the logical design on a site-by-site basis. The final design is reviewed by the entire Implementation Team to ensure accuracy, functionality, and completion.

Implementation Phase and Maintenance

The implementation phase is when the equipment is installed at the customer's premise. During this phase, the equipment will be inventoried, all supporting construction will be completed and verified, the equipment is installed, configured and tested for production and maintained with precision.

Our Service: You need us because..

- We provide skills not available internally to deal with the increased complexity of technical applications.
- We can improve return on investment (ROI) by strategically cutting a businesses IT operating costs
